

Nemonix Legacy Solutions

STABILIZE, UPGRADE & SUPPORT LEGACY HARDWARE

About Nemonix

Nemonix Engineering, Inc. is a 35-year old custom manufacturing firm that specializes in stabilizing, upgrading, and supporting legacy system hardware. We provide parts and services for hardware originally manufactured by a full spectrum of firms, including DEC, Compaq, HP, IBM, and Sun. We appreciate that many of our customers run critical applications on their hardware, so we set the highest standards for ourselves, backed by multi-year, extendable warranties.

Our products and services are grouped into three functional areas.

1. Stabilize with Nemonix Technology Refresh™

When managing diminishing technology resources, the first priority is to reduce or remove the risk of catastrophic failure by stabilizing the critical hardware components underlying these systems/sub-systems. Rather than reacting to failure, or refurbishing a few bad patches here and there, Nemonix offers an alternative: Nemonix Technology Refresh™ service. Nemonix Technology Refresh™ proactively removes and replaces ALL parts that are at high risk of failure with new, more efficient parts—at a fraction of the cost of emulation or new hardware migration. **The result: a like-new system** that Nemonix confidently warrants for up to 10 years.

For more information visit us at: <http://stability.nemonixengineering.com>

2. Upgrade with Nemonix Products

Nemonix offers customers the option of significantly upgrading storage drives, SCSI, Ethernet, CPU, and cache performance. For example, our Ethernet controllers for VAX can increase Ethernet throughput up to 20X over the OEM part. We also offer fast SCSI drives in mechanical, solid state (flash), and hybrid varieties. Each drive is custom manufactured to provide you with **100% form, fit and function with your existing OEM drive**, and is cross-platform across all SCSI-based systems.

For more information visit us at: <http://upgrade.nemonixengineering.com>

3. Support from Nemonix Services

Finally, we provide depot-level repair services for legacy hardware systems and system components. Where repair is not feasible, we offer custom engineering and fabrication services. Our hardware customers can also purchase a variety of telephone support contracts from us.

PRODUCTS

- ❖ Solid State SCSI Drives
- ❖ Custom SCSI Hard Disks
- ❖ Hybrid SCSI Hard Disks
- ❖ 100 Mb Ethernet NIC
- ❖ 1 Gb Ethernet NIC Copper
2 to 6 Ports
- ❖ 1 Gb Ethernet NIC Fiber
2 to 4 Ports
- ❖ SCSI Controller
- ❖ SCSI/Ethernet Combo
- ❖ CPU & Cache Upgrades
- ❖ RAM Upgrades
- ❖ VT Terminals
- ❖ ANSI/ASCII Keyboards

SERVICES

- ❖ Technology Refresh™
- ❖ Depot-level repair
- ❖ Custom engineering
- ❖ Telephone support
