SmartMon-VMS

Advanced disk management & failure prediction

Knowledge *REALLY IS* power with SmartMon-VMS.

Where openVMS gives you 30 basic fields of information about your drive: capacity, make, model, format, etc., SmartMon-VMS extracts around 500 critical fields, directly from your drive hardware!

You deserve to know the rich information SmartMon-VMS exposes for you:

- Quickly assess the performance of all your drive assets for better resource allocation.
- Discover bad blocks BEFORE your OS or application needs the file(s) on them.
- Expose drive age by showing the total hours a drive was powered up during its lifetime.
- Turn on advanced self-healing during idle time, for drives that support it.
- Securely erase data using Department of Defense standards and full audit reporting.
- Perform advanced stress testing, including spinning disks up/down to simulate failure.
- Detect cabling/vibration errors.
- Much more information, many more features, absolutely empowering!
